AVEEK DATTA Career Highlights

As an infrastructure lead for a career development program for the government:

- Quickly achieved expertise in complex software packages and installed and configured software per project specifications
- Researched complex system integration issues and provided recommendations to upper management for resolution, including pros and cons for each decision

As a collaboration system administrator for a large school district:

- Implemented a web based solution to provide forums, social bookmarking, blogging for thousands of teachers in a large school district (Lotus Quickplace & Connections)
- Supported extensive customizations of off the shelf software to meet client needs
- Installed, documented and supported the development, integration, user acceptance and production environments for WebSphere Portal

As a technical manager for PC deployment for a large health care company:

- Created and developed a standard deployment work flow and data model
- Managed and maintained a link between customer's legacy asset tracking system and deployment tracking system for quality assurance
- Designed, programmed and put into production a web-based deployment tracking system for over 6000 PCs at hundreds of locations using PHP and MySQL

As a site lead / technical lead for electronic patient record deployment for the government:

- Was only individual on 200+ person team certified to act in all of the following roles:
 - Implementation Support: Provided direct support to clinicians at their offices.
 - Instructor: Taught groups of students from various roles in a classroom.
 - Technical Lead: Installed software / PCs and troubleshoot system issues.
 - Site Lead: Managed 20+ members assigned to a site in all of the above roles.
- Despite system technical failures, completed training of over two hundred users and deployed software on schedule, while other locations stopped deployment.

As project manager for video implementation and maintenance for a large school district:

- Compressed a project planned for one year into five months, with no change in scope
- Recovered from severe delays in subcontractor work products and materials
- Managed development of a customized digital asset management (DAM) system, storing and making video content available for all teachers in district on demand
- Aligned technology with the school district's mission of educating children

As project manager for application development/maintenance for a large chemical company:

- Identified support and design considerations for approximately a hundred poorly documented web applications due to company organizational change
- Directly responsible for extension of initial three-month contract to over a year's length.
